

How to set up Node js + Express + Mongo DB

Step-by-step Guidelines For Set Up Express app

1. Create a Folder
2. Create a File (app.js)
3. >> npm install express <<
4. Require express

```
Const express = require ( 'express' );
```

5. Call Express() / Create express app

```
Const app = express() ;
```

6. Define the PORT

```
Const PORT = process.env.PORT
```

7. Create .env File

```
PORT = 3000
```

7.1 >> npm install dotenv <<

7.2 Require dotenv

```
Const dotenv = require ( 'dotenv' );
```

7.3 Configure dotenv

```
dotenv.config() ;
```

- 8 Update Package.json

```
"script":{  
  "start ": "node app.js",  
  "dev": "nodemon app.js"  
}
```

- 9 >> npm install nodemon << (optional)

- 10 Create a basic Route / Get

```
app.get ( ' / ', .....IMPORT HERE.....)
```

- 11 Use app.listen

```
App.listen (PORT, console.log ( 'serverstarted on  
http://localhost: ' + PORT
```

12 Create MVC Architecture (MODEL , VIEW , CONTROLLER)

12.1 Create Controller Folder

- a. Create a File _____ .js (Eg : cotroller.js)
- b. Add Functions and export

```
export function gethome (req , res) {  
  res.render('index')  
}
```

- index is .ejs File name

12.2 Create a View Folder

- a. Create a File _____ .ejs (Eg : index.ejs) (This is HTML Page)
- b. >> npm install ejs <<

How to Set up View Engines in express

1. >> npm install ejs <<
2. Use ejs

```
app.set ('view engine' , 'ejs');  
app.set('view' , 'views');
```

- Views = Folder name

3. Set up Route to Render the EJS

3.1

```
app.post (' / register' ,register )
```

- /register = Route name , we set in index.ejs file
Action= “/register”
- register = import here

3.2 Export Functions (Eg : register)

```
export function register (req , res){  
  res.render ('index')  
}
```

- Index= .ejs file name

3.3 Give Conditions
